

Original Design and Manufacture

Designed to solve **your unique** challenges.
Proudly made in Britain.

What We Do

Our clients tell us that off-the-shelf racks and cabinets they find in catalogues are a compromise. A product manager's idea of what will suit most situations, but not quite theirs.

We are different. Our team listens to your needs to develop individual solutions, that perform exactly as you want.

The Rainford Four Pillars process – Consult, Design, Make, and Protect - is a proven methodology that allows us to do this rapidly and cost effectively, for annual volumes from dozens to thousands.

Tough environments, applications and specifications are our forté – all certifiable when required.

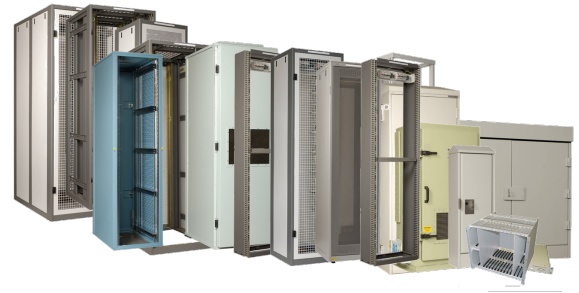

Plus we can pre-wire as part of the assembly process using factory labour, 100% standardised, saving costly time on site. You just add the clever parts.

Combine specialist engineering and agility with a modern high-capacity factory, and you can see why market leaders trust Rainford.

Our Customers

Our customers are critical infrastructure operators, system integrators, and global OEMs from a wide variety of markets.

Directly and indirectly we serve fixed and mobile telecom networks, operators of road and rail systems, data centres, defence platforms, and utilities like water and energy.

Original Design and Manufacture

Engineering Focus

Our UK engineering team is experienced in developing solutions for challenges with thermal, electro-magnetic fields (RF/EMC), seismic conditions, shock and vibration, ingress protection (IP), and vandals, certified to global civilian and military standards.

Operating from a modern UK factory our facilities are built with the highest level of flexibility and capacity, for volume manufacture that can support national infrastructure projects.

Rainford Solutions Ltd is ISO 9001:2015 quality certified.

Factoids

- Established 1982
- 114,000 sq. ft. UK manufacturing facility
- British engineering
- ISO 9001:2015 certified
- Agile design, lean manufacturing

Why Rainford?

- ✓ Deep industry experience and technical excellence
- ✓ Capacity for national scale projects
- ✓ High quality = reliability = low total cost of ownership
- ✓ Flexible rapid design customisation
- ✓ Security of working with a leading supplier
